

What is claimed is:

1. A method of generating an album comprising a composite image in which a plurality of images obtained by a digital camera are arranged in a desired layout, the digital camera comprising
5 image recording means for recording image data sets representing the images in a recording medium with accompanying information regarding the image data sets added thereto, the album generation method comprising the steps of:

reading the image data sets and the accompanying
10 information added thereto from the recording medium; and

generating composite image data representing the composite image based on the accompanying information by inserting the respective images represented by the image data sets in image insertion areas of a template having the image insertion areas corresponding to the accompanying information.

2. An album generation method as defined in Claim 1,
wherein the template is selected based on the accompanying
information.

3. An album generation method as defined in Claim 1,
20 wherein the step of generating the composite image data is the step of generating the composite image data by inserting the accompanying information in the template, in addition to the images.

4. An album generation method as defined in Claim 2,
25 wherein the step of generating the composite image data is the step of generating the composite image data by inserting the

accompanying information in the template, in addition to the images.

5. An album generation method as defined in any one of Claims 1 to 4, the digital camera further comprising:

5 photographing means for obtaining image data representing a subject by photographing the subject;

storage means for storing recommended composition data sets representing images of recommended composition at various photographing locations by relating photographing information including location information representing the photographing locations to the recommended composition data sets;

photographing information obtaining means for obtaining acquired photographing information;

reading means for reading a desired one of the recommended composition data sets related to the photographing information corresponding to the acquired photographing information from the storage means, based on the acquired photographing information obtained by the photographing information obtaining means; and

20 display means for displaying a recommended composition image represented by the desired recommended composition_data set in superposition on an image represented by the image data obtained by the photographing means, wherein the image recording means is means for including the acquired photographing information in the accompanying information, for adding the accompanying information to the image data obtained by the

photographing means based on the recommended composition, and for recording a plurality of sets of the image data having the accompanying information in the recording medium.

6. An album generation method as defined in Claim 5,
5 further comprising the step of replacing the image data obtained according to the desired recommended composition data set with prepared image data corresponding to the desired recommended composition data set.

7. An album generating apparatus for generating an album comprising a composite image in which a plurality of images obtained by a digital camera are arranged in a desired layout, the digital camera comprising image recording means for recording image data sets representing the images and having accompanying information regarding the image data sets in a recording medium, the album generating apparatus comprising:
10
15

reading means for reading the image data sets and the accompanying information added thereto from the recording medium; and

20 composition means for generating composite image data representing the composite image based on the accompanying information by inserting the respective images represented by the image data sets into image insertion areas of a template having the image insertion areas corresponding to the accompanying information.

25 8. An album generating apparatus as defined in Claim 7,
further comprising template selecting means for selecting the

template based on the accompanying information.

9. An album generating apparatus as defined in Claim 7, wherein the composition means generates the composite image data by inserting the accompanying information together with the images in the template.

5 10. An album generating apparatus as defined in Claim 8, wherein the composition means generates the composite image data by inserting the accompanying information together with the images in the template.

11. An album generating apparatus as defined in any one of Claims 7 to 10, the digital camera further comprising:

photographing means for obtaining image data representing a subject by photographing the subject;

storage means for storing recommended composition data sets representing images of recommended composition at various photographing locations by relating photographing information including location information representing the photographing locations to the recommended composition data sets;

photographing information obtaining means for obtaining acquired photographing information;

20 25 reading means for reading a desired one of the recommended composition data sets related to the photographing information corresponding to the acquired photographing information from the storage means, based on the acquired photographing information obtained by the photographing information obtaining means; and

display means for displaying a recommended composition image represented by the desired recommended composition data set in superposition on an image represented by the image data obtained by the photographing means, wherein the image recording 5 is being means for including the acquired photographing information in the accompanying information, for adding the accompanying information to the image data obtained by the photographing means based on the recommended composition, and for recording a plurality of sets of the image data having the 10 accompanying information in the recording medium.

12. An album generating apparatus as defined in Claim 11, wherein the composition means enables replacement of the image data obtained according to the desired recommended composition data set with prepared image data corresponding 15 to the desired recommended composition data set.

13. A computer-readable recording medium storing a program to cause a computer to execute an album generation method for generating an album comprising a composite image in which a plurality of images obtained by a digital camera are arranged 20 in a desired layout, the digital camera comprising image recording means for recording image data sets representing the images and having accompanying information regarding the image data sets in a recording medium, the program comprising the procedures of:

25 reading the image data sets and the accompanying information added thereto from the recording medium; and

generating composite image data representing the composite image based on the accompanying information by inserting the respective images represented by the image data sets in image insertion areas of a template having the image 5 insertion areas corresponding to the accompanying information.

14. A computer-readable recording medium as defined in Claim 13, wherein the template is selected based on the accompanying information.

15. A computer-readable recording medium as defined in Claim 13, the procedure of generating the composite image data being the procedure of generating the composite image data by inserting the accompanying information together with the images in the template.

16. A computer-readable recording medium as defined in Claim 14, the procedure of generating the composite image data being the procedure of generating the composite image data by inserting the accompanying information together with the images in the template.

17. A computer-readable recording medium as defined in 20 any one of Claims 13 to 16, the digital camera further comprising:

photographing means for obtaining image data representing a subject by photographing the subject;

storage means for storing recommended composition data sets representing images of recommended composition at various 25 photographing locations by relating photographing information including location information representing the photographing

locations to the recommended composition data sets;
photographing information obtaining means for obtaining
acquired photographing information;
reading means for reading a desired one of the recommended
5 composition data sets related to the photographing information
corresponding to the acquired photographing information from
the storage means, based on the acquired photographing
information obtained by the photographing information obtaining
means; and

50 display means for displaying a recommended composition
image represented by the desired recommended composition data
set in superposition on an image represented by the image data
obtained by the photographing means, wherein the image recording
means is means for including the acquired photographing
information in the accompanying information, for adding the
accompanying information to the image data obtained by the
photographing means based on the recommended composition, and
for recording a plurality of sets of the image data having the
accompanying information in the recording medium.

20 18. A computer-readable recording medium as defined in
Claim 17, the program further comprising the procedure of
replacing the image data obtained according to the desired
recommended composition data set with prepared image data
corresponding to the desired recommended composition data set.
